

Advancing the Evolution of Soil

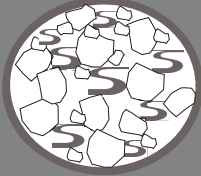

Cart paths that blend with nature.

Natural aggregate soil can be used for cart paths in the same way concrete and asphalt are used.

Twenty six years ago Jon and Jim Hubbs, owners of a native seed company, discovered **Stabilizer - the Original Natural Soil Binder**. Stabilizer is a powder that comes from a crushed seed hull. Once blended into the aggregate, the Stabilizer absorbs water and binds the soil particles together. The result is a natural looking cart path that blends with the native surroundings, but is also strong enough to withstand daily traffic.

PAVING MATERIALS

Polymer Technology

Over 100,000 projects later, the company's mission, to advance the evolution of soil, still motivates Stabilizer Solutions to improve upon the same groundbreaking ideas cultivated in 1982. The most recent development, **Stalok Paving Material** utilizes the same *Polymer Technology* as the **Stalok Bunker Liner** and applies it to cart paths.

Stalok[®]
BUNKER LINER

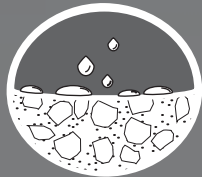

How long does your sand last?

Your bunkers go through a lot during the course of a day. Wind, water, golfer and maintenance traffic are the biggest *hazards* to any bunker. Can you keep your bunker sand pristine despite the beating it takes?

Stalok Bunker Liner helps you get the most out of your sand in any condition.

Stalok Bunker Liner is natural soil enhanced with polymer. The polymer binds the soil and protects it against the elements. It is similar to enhancing your natural wood with a waterproof sealer.

Polymer Technology

Once compacted into place the soil particles bind together, creating a firm, yet flexible seal. This seal **eliminates** contamination from below. Its superior strength can withstand the use of mechanical bunker rakes and other maintenance vehicles, which save you time and money. Water rolls right off of the polymer coating, so you won't have to pump your bunkers. Stalok Bunker Liner won't attack your golfers either, nothing to interfere with a shot. All of this protection means that your sand lasts longer.

Stalok Bunker Liner helps you get the most out of your bunker sand.

StaLok[®]

BUNKER LINER

Your Staff Can Install Stalok Bunker Liner.

Installation is a snap simply spread and compact at a 2-inch depth. Stalok Bunker Liner makes it easy to follow the contours of your bunker. If you ever need to expand an area, simply tamp additional material into place.

Stalok Bunker Liner also maintains the structural integrity of the installation, which means you keep your desired shape longer.
